ABOUT US

Beginning in 2009, EnviroElectronics has become one of the most trusted names in the Asset Management Industry due to our unique ability to deliver a safe, secure, and fully environmentally accredited IT disposal service, flexible enough to cater to any type of e-waste, regardless of the quantity or condition.

Working with both private and public sector organisations, we uphold tight controls over the disposal and redeployment of decommissioned IT equipment, in full compliance with the latest EU and UK legislation.

EnviroElectronics continually strives to fulfill our primary objective of delivering a sustainable, safe, and secure IT disposal solution to schools, colleges, and universities. In this regard, we have ensured that thousands of educational establishments across the UK correctly dispose of their retired IT equipment in accordance with the latest WEEE (Waste Electrical and Electronic Equipment) recycling legislation, The Data Protection Act 1998, and the Duty of Care.

Importantly, our free nationwide collection scheme, coupled with free allocations of our lockable bins and cages, enables thousands of tonnes of electrical equipment to be transported, stored, recycled, and reused; negating the need for landfills, and their attendant effects on the environment.

"Our significant growth within such a short period of time runs parallel to the growing number of organisations around the UK which now see the ethical disposal of IT equipment as a social responsibility".

OUR ACCREDITATIONS

SERVICES WE PROVIDE

Free UK Coverage

Our fleet extends right across mainland UK with no minimum quantity requirements needed.

Free Data Destruction

We shred, crush and wipe all storage mediums to INFOSEC standard 5 with onsite services available and proof of destruction.

Zero Landfill Policy

We reecycle, refurbish or re-purpose all WEEE in line with ISO procedure.

Asset Management Services

Acr:£ss each and every asset report and certification with our user-friendly online management system.

Residual Value

If you're disposing of large quantities of laptops, PCs, tablets, or mobile phones you may be eligible for cashback.

GDPR Compliant

All our fleet come fitted with CCTV onboard and Live GPS zonal tracking with our team fully security vetted and photo ID.

LOCKABLE WHEELIE BIN & CAGE SERVICE

SIMPLY FILL-AS-YOU-GO WITH OUR FREE SECURE BINS & CAGES

With a wide range of indoor and outdoor container services, you can be rest assured we have the right size bin or cage to suit your requirements. We supply as many as you require at no cost and with no time restraints or contracts attached. Simply fill them at your convenience, and we will exchange them as many times as you need, reducing collection to a matter of minutes.

WHAT WE COLLECT

We collect all manner of WEEE including:

Servers, Tonners, PCs, Laptops, Projectors, Desktops, Towers, TFT Monitors, CRT Monitors, UPS Systems, Laser Printers, Plotters, Server Racks, Network Switches & Hubs, RAID Arrays, Network Storage, Network Routers & Firewalls, Other Miscellaneous IT Equipment, Telephone systems, any other related WEEE including but not limited to the above.

HOW WE OPERATE

A. OUR PEOPLE:

Our drivers and team who attend to your collections are all fully vetted, secured Staff.

All our staff undergo a full CRB (Criminal Records Bureau) check before they commence any work with Enviro Electronics; be it fleet, warehouse or in any of our offices on the handling of sensitive data (whether that be; hard drives, backup disk tapes, or confidential documents). An individual copy of a staff's CRB record is always carried with them along with a formal ID whilst offsite undertaking collections duties and they will be happy to produce them at your request.

B. OUR PREMISES:

Confidential Destruction Premises

CCTV Systems

Our secure disposal facility includes on-site CCTV systems which monitors the premises on a day-to-day basis, allowing the unloading process of sensitive storage bearing devices to be visually documented on arrival.

Intruder Alarm

An intruder alarm is also visible which sounds and alerts a dedicated 24 hour call centre, who then take the necessary action.

C. OUR PROCESS

1. BOOKING

You can book/request for collections either by calling or via our online portal.

Our trained agents are always on standby to pick up your bookings and advise you of a suitable date for collection. They would then manage all queries and enquiries during the process until you receive all your reports.

2. COLLECTION

We set off from our premises with your choice bin and or cage and all relevant details and documents with the aim of completing your collection between 8am-3pm, irrespective of where you are in the country. The driver will also call, whilst en route.

3. AT YOUR PREMISES

At your premises, our DBS checked drivers will request to meet the named transferor on the WTN (Waste Transfer Note). The driver is then supervised by the transferor until all the collections are completed after which the required WTN and or HTN (Hazardous Transfer Note) are signed by both the driver and the transferor and handled accordingly.

The requested bin/cage is then left.

4. YOUR ASSETS TRANSPORTED SAFELY

Our tracked and secured vehicles will transport your assets safely to our premises before 6pm of the same day of collection.

5. OUR PREMISES

Our premises boasts of state of the art security CCTV systems, 24 hour manned surveillance and intruder alarm systems.

Our data processing /shredding area is inbuilt and under lock and key. It houses an industry standard Nord data shredding machine, stand alone data sanitizers and degaussers. And we also operate a Kill disk industrial licensed for 100 bays amongst other industry approved software.

Currently, industry leading experts recommend firstly wiping or degaussing storage bearing devices such as Hard Drives to a certified precedent such as HMG infosec 5 and PCI DSS and then to physically destroy each device thereafter.

This ensures all data bearing items are cleansed before shredding. Our trained staff will then process your assets in line with industry standards and prepare your reports accordingly.

6. YOUR REPORTS

Within 7 working days from collection, your asset reports and certifications are ready and uploaded to your portal, accessible from our website. This gives you access to infinite downloads and also creates a record and history of all your reports.

7. FINAL OUTCOME OF YOUR WEE WASTE

REUSE

REPURPOSE

RECYCLE

FINAL OUTCOME OF YOUR WEEE WASTE

(OUR LANDFILL DIVERSION STRATEGY)

We relentlessly pursue our main objective which is to ensure all redundant IT equipment we receive is either: **A) Reused** **B) Repurposed** **C) Recycled**

IT equipment such as laptops, desktops and printers which are under 5 years old are priority tested to see whether they can be economically refurbished and returned to use in organisations like small local businesses, charities and social enterprises. We also target the wider community allowing individuals the opportunity to purchase advanced IT equipment which otherwise perhaps would not be affordable.

REUSE

Introducing repurposing initiatives has enabled us to alter the purpose of electrical items such as desktop computers which are conventionally used to assist office related work. Working with local manufacturing companies, for instance, has enabled us to provide them with recycled computers which are a cheaper and a more sustainable alternative; a go-to option for cutting down cost.

REPURPOSE

RECYCLE

Equipment which is 5 years or older invariably tends to be recycled, with precious metals extracted from components such as motherboards, RAM and cabling through a specialized processing plant. These materials are then used to create newer and more desirable products.

YOUR REPORTS & CERTIFICATES

We produce a comprehensive asset report for every collection carried out depending upon the level of service taken.

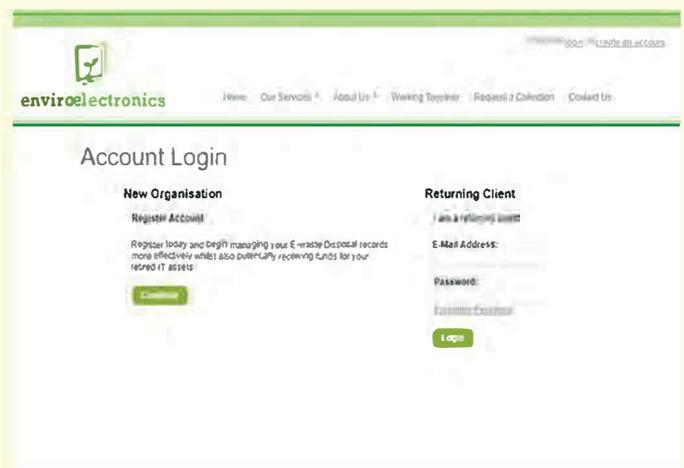

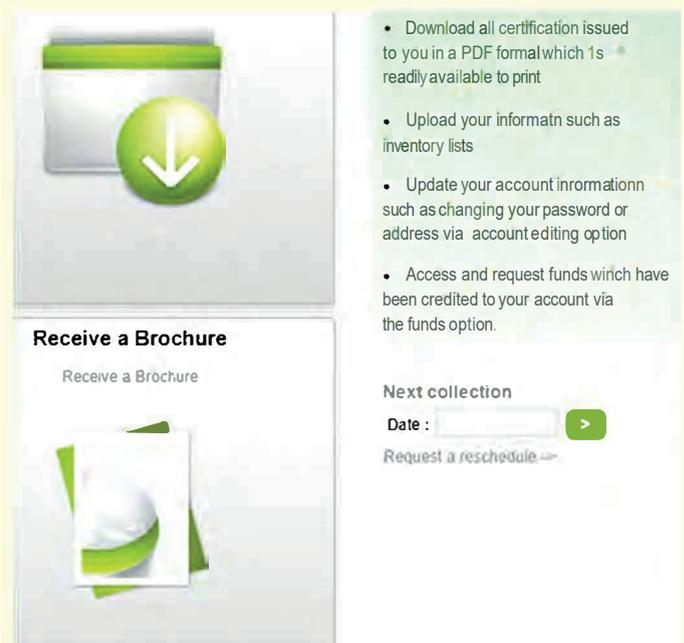

Each individual item, with the exception of minor peripherals (i.e. Keyboards and mice) is logged into an asset report. Thereafter completed asset reports are forwarded to clients in a **PDF** electronic format and are also available in hard copy. A typical asset report will include the following information as a minimum (although additional information can be added if required).

- Make & model of each item of equipment.
- Customer asset number (if applicable).
- Equipment serial number.
- Data erase certification for individual storage mediums i.e. Hard Drives.
- Complete **WEEE** certificate containing EWC codes & serial numbers.

Collection summary.

ON PORTAL

DATA DESTRUCTION

YOUR PEACE OF MIND

OVERVIEW

Whether you require data destruction supplementary or exclusively to our IT disposal solution, our fully security screened staff will permanently destroy any data bearing devices to MOD and Government standards using latest CESG certified products whilst also aligning to some of the highest recognised standards;

- PCI DSS (Payment Card Industry) Data Security Standard
- HIPAA (Health Information Portability and Accountability Act)
- PIPEDA (Personal Information Protection and Electronic Documents Act)
- Data Protection Act 1998

Data destruction certificates are issued thereafter itemising each individual serial number of the wiped storage medium giving you complete peace of mind that they have been erased following the highest recognised data destruction standards.

What's more, your storage mediums will always be physically shredded or crushed thereafter, so you can be rest assured knowing no storage devices such as Hard Drives will ever be reused in another reconditioned PC or laptop.

"We abide by industry leading standards to ensure that your data is fully safe guarded and destroyed beyond the point of recovery."

ZERO CARBON & ZERO LANDFILL

OUR ONGOING PROACTIVE PLAN

We at Enviro Electronics are committed to protecting the environment and operate a very robust net zero-carbon policy across the board. Supporting the governments ambition to reach a net zero nation by 2050 to help tackle climate change, the Environment Agency has set up a road map of 5 key areas they intend to make significant changes to.

One of these 5 areas most relevant to us is transportation. At Enviro Electronics, we have a considered approach to the collections of our **WEEE**, which also contributes significantly in reducing emissions. We are committed to using EURO 6 engine vans as our choice vans for fleet. These are well known to have lower carbon emission in comparison to other engine types.

We are also developing a strategy to upgrade our fleet to electric vans in the very near future, given they are the most eco-friendly.
